RICHARD W. WIEKING
CLERK, U.S. DISTRICT COURT
NORTHERN DISTRICT OF CALIFORNIA
SAN JOSE

THE UNITED STATES OF AMERICA

vs.

SUIBIN ZHANG

INDICTMENT

Counts One Through Three: 18 U.S.C. §§ 1030(a)(3)(A) - Computer Fraud;

Counts Four Through Six: 18 U.S.C. §§ 1832(a)(1), (2) and (4) - Theft, Misappropriation, and Unauthorized Downloading of Trade Secrets;

Count Seven: 18 U.S.C. §§ 1832(a)(2) and (4) - Unauthorized Copying and Transmission of Trade Secrets;

Count Eight: 18 U.S.C. § 1832(a)(3) - Unauthorized Possession of Stolen Trade Secrets.

A true bill.

20

21   I N D I C T M E N T

22 The Grand Jury charges:

23   BACKGROUND

24 At all times relevant to this Indictment:

25   1. Broadcom Corporation ("Broadcom") was a corporation based in San Jose, California,

26 that designed and marketed semiconductor chips for broadband communications devices.

27   2. Marvell Semiconductor, Inc. ("Marvell") was a corporation based in Sunnyvale,

28 California that designed and marketed semiconductor chips for use in broadband communication

INDICTMENT
[United States v. Suibin Zhang]

1   devices in interstate and foreign commerce. Among other items, Marvell sold switches and

2   transceivers to companies for use in the manufacture of networking devices. Broadcom and

3   Marvell were competitors.

4   3. Netgear, Inc. ("Netgear") was a corporation based in San Jose, California that offered

5   networking products for small office users, home office users and small businesses. Netgear

6   used the original design manufacturer ("ODM") methodology for most of its product

7   development activities. Under this method, Netgear defined the product concept and

8   specification and performed the technology selection. Based on this information, Netgear's

9   technology suppliers, such as Marvell and Broadcom, developed the chipsets, software drivers

10   and detailed circuit designs.

11   4. Defendant SUIBIN ZHANG was employed by Netgear from approximately August

12   2000 to April 2005. Hired by Netgear as an engineer working on switch designs, defendant

13   ZHANG was promoted in December 2001 to Product Development Manager and was thereafter

14   responsible for Ethernet Hub and Switch development.

                        Selected Marvell Product Lines

16   5. Switches in a computer network are devices that filter and forward packets between

17   segments in a local-area network ("LAN"). Marvell sold two switches, named "Link Street" and

18   "Prestera," which were used in different markets and had different features and capabilities. The

19   Link Street switches were designed for use in small office and home office networks, whereas the

20   Prestera switches were designed for use by larger businesses. Marvell marketed three "families"

21   of Prestera switches: a) the DX, which was designed for small to medium business networks; b)

22   the EX, which was designed for Enterprise level networks used by large businesses; and c) the

23   MX, which was designed for Metropolitan Area Networks used by telecommunication

24   companies or other large businesses with networks covering large geographic areas.

25   6. Transceivers are devices that transmit and receive digital or analog signals within a

26   network. The term "transceiver" is often used to describe the component in LANs that applies

27   signals onto the network wire and detects signals passing through the wire. Marvell's

28   transceivers include a product line named Alaska Gigabit Quad-Port PHY.

INDICTMENT
[United States v. Suibin Zhang]   2

1

<u>Marvell's Secure Extranet</u>

2   7. Marvell maintained a secure Extranet Web site, hosted by a server located in the

3   Northern District of California, that served as a document repository that allowed authorized

4   customers controlled access to Marvell's proprietary product information. (An "extranet" is a

5   private network that uses the Internet to share part of a business's information or operations with

6   suppliers, vendors, partners, customers, or other businesses.) Marvell's Web site stated: "The

7   Marvell Extranet requires all users to be under a Non-Disclosure Agreement (NDA), because the

8   information provided within the site represents Marvell-proprietary information." Under the

9   required NDAs, users of the Extranet agreed to maintain the confidentiality of the information

10   available on the site. The Extranet allowed authorized users to download specific files pursuant

11   to the NDAs for purposes of legitimate business with Marvell.

12   8. To gain access to the Extranet, Marvell required applicants to complete a registration

13   form which asked for name, address, e-mail address, company name, and product selection.

14   After submission, a product manager at Marvell reviewed all registration requests and decided

15   which Extranet "folders" – or categories of proprietary information – the customer would be

16   permitted to access. After Marvell verified that an NDA had been signed, the customer was

17   assigned a user identification, which was that customer's e-mail address, and selected a secure

18   password. The password was required to be reset every 120 days. The user was prompted to the

19   Extranet "Terms of Use" after initial log-in, and the user was required to click the "Accept"

20   button to enter the Extranet site. These Terms of Use incorporated the NDA and a limited use

21   license agreement.

22   9. Certain files on the Extranet required an additional password. For these files, the user

23   was required to send an e-mail to Marvell requesting a temporary password. If acceptable,

24   Marvell then e-mailed the user a unique password relevant only for a particular download and

25   which expired after sixty minutes. Additional downloads required other password requests.

26   Other files on the Extranet required an additional "open password" selected by the user, and

27   certain files had print restrictions.

28   10. A unique identification mark, or "hash code," was incorporated into every file that

INDICTMENT
[United States v. Suibin Zhang]   3

1   authorized users downloaded from the Extranet. The hash code identified the user who

2   downloaded the file and also recorded the date and time in an alphanumeric code. In addition,

3   "Confidential" watermarks were incorporated into downloaded files in three separate locations,

4   including diagonally across the page. Marvell maintained records reflecting user activity on the

5   Extranet, including: name of the customer; name of the authorized employee or user; email

6   account of authorized user; date and time of log-ins; a record of session activity, such as whether

7   downloads occurred; and the title, document size, and a description of all downloaded materials.

8   Marvell's Business Relationship with Netgear

9   11. Marvell served as one of Netgear's "technology suppliers" in its product

10 development process. Because of Netgear's customer base of small businesses and home users,

11 Netgear purchased switches from Marvell's Link Street and DX product lines, rather than

12 switches from Marvell's EX and MX product lines, which were designed for larger businesses or

13 telecom users. As part of its business relationship with Netgear, Marvell permitted certain

14 Netgear employees, including defendant ZHANG, to access Marvell's Extranet, pursuant to an

15 NDA and limited use license agreement.

16   Defendant ZHANG and His Employment by Broadcom

17   12. In or about March 2005, defendant ZHANG interviewed for positions at Marvell and

18 Broadcom. Defendant ZHANG rejected Marvell's employment offer on or about March 7, 2005.

19 The following day, on or about March 8, 2005, defendant ZHANG accepted an offer of

20 employment from Broadcom to work in its Network Switching Group. Defendant ZHANG

21 began working at Broadcom on or about April 25, 2005.

22 COUNT ONE: (18 U.S.C. §§ 1030(a)(4), 1030(c)(3)(A) -- Computer Fraud)

23   13. The allegations in paragraphs 1-12 are realleged and incorporated herein as if set

24 forth in full.

25   14. On or about March 9, 2005, in the Northern District of California and elsewhere, the

26 defendant

27   SUIBIN ZHANG

28 did knowingly and with intent to defraud, access without authorization, and exceed authorized

INDICTMENT
[United States v. Suibin Zhang]   4

1   access, a protected computer, namely, Marvell's Extranet, and by means of such conduct further

2   the intended fraud and download and obtain things of value, as set forth more specifically below
